To Whom It May Concern:

**Re: Flamespread Rating, Class C or III (76-200)**

Timber Products is a manufacturer of high quality, finished and unfinished hardwood-faced plywood.

Results of sample product testing by both the Decorative Hardwood Association (DHA) and the American Wood Council (AWC) under ASTM E-84 methods indicate that Timber Products' hardwood plywood meets the Class C or III (76-200) flamespread classification. To be in this classification, panels must have a 450 or less smoke development index.

For additional information, contact your sales representative who will answer your questions or refer them to our technical team.

Sincerely,

*David Reed*
