

## GeckoPly™

### DESCRIPTION

GeckoPly is our termite resistant hardwood plywood that uses a custom insecticide that is added to the ULEF resin to protect against attack from termites and other pests when used in indoor applications. Between each layer of veneer, there is a layer of adhesive which allows the insecticide in the resin to transfer from the glue line into the veneer from the energy of the curing process.

Besides the custom glue blend, GeckoPly stands out from the competition because the wood is treated to a concentration that meets the Australian/New Zealand H2 standard – the toughest standard for termite resistance in the world.

### APPLICATIONS

GeckoPly has many indoor applications such as kitchen cabinets, paneling, furniture and architectural woodwork, to name a few. The custom blend doesn't change the color of the wood and can be added to any veneer species.

## GeckoPly

## SPECIFICATIONS

**Size:** 4' x 8'

**Thickness:** 5.2 mm to 1"

**Veneer Species:** Any

**Core Material:** ULEF Veneer Core and Pro-Core

## APPLICATIONS

- Kitchen cabinets
- Store fixtures
- Paneling
- Ceiling tiles
- Furniture
- Closets
- Architectural woodworking
- And more!

## TEST RESULTS\*

GeckoPly stands up well to termites, losing only 2.95% of product during testing, with a 9.8 rating. Any product scoring above a 7 on the 1-10 scale is considered to have termite resistance. In addition to the small amount of product loss, Timber Products' GeckoPly panels killed 100% of the termites in the test.
